

Kiwifruit: increasing the fruit weight

Objective of the trial

Verify the effect of the foliar program of BMS Micro-Nutrients developed for increasing fruit weight.

General information

Conditions of the trial:

Trial location: Italy – Veneto
Variety: Hayward
In cooperation with: Azienda Agricola Bovo Angelo Di Giuseppe e F.lli

Treatments

2 modalities:

- ⇒ T0: Untreated control (rest of the plot)
- ⇒ T1: BMS MN (plot of 7 trees):
3 treatments with Chelal Noor at 2 kg/ha

The whole field was also treated with CPPU.

Results

	Mean fruit weight
T0: Control	91 g
T1: BMS MN	104 g

- ⇒ **Conclusion:** With the foliar nutrition program, the average fruit weight increases with **14%**.

Distribution of fruit weight
