

Strawberry: Hyberol

Aim of the trial

The aim of the trial is to improve the root development of strawberry plants with Hyberol applications.

General information

Conditions of the trial:

Trial location: France – Sud-Ouest
Variety: Gariguette
Type de sol: Hydroponic
In cooperation with: CB Le Fruisier

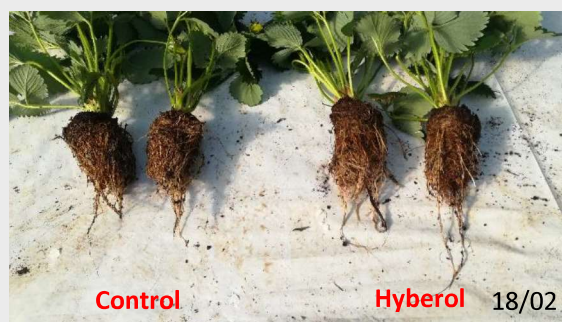

Treatments

2 modalities:

- **Untreated control**
- **Hyberol** – applied through drip irrigation:
 - o 20 to 25 days after plantation:
 - o After 10 days:

Hyberol at 2.5 L/ha
Hyberol at 2.5 L/ha

Results

CONCLUSION: On February 7th, as well as February 18th, root development is significantly better in plants treated with Hyberol compared to the untreated control. There is also a difference in the number of flowers (see photos of February 7th). Visually, seen from above, we can see more flowers in plants treated with Hyberol.
