

BMS Micro-Nutrients develops high-quality foliar nutrition products and strives, where feasible and technically possible, to produce them as efficiently and ecologically as possible, taking the environmental aspects of the entire life cycle of our products into account.

BMS Micro-Nutrients is convinced that this policy not only contributes to maximum customer satisfaction and sustainable development, but also provides a competitive advantage for the company itself.

The board and management of BMS Micro-Nutrients therefore undertake to:

- comply with all applicable laws and other internal safety, health, and environmental requirements during both production and the stipulated use of the products to avoid or minimise any environmental impacts at all times;
- pay attention to the needs and expectations of customers and other stakeholders;
- create a framework to continuously define, assess, and improve quality and environmental objectives and targets;
- identify and address, where necessary, the risks and opportunities associated with our operations;
- protect the environment and prevent pollution in any economically viable way; this is why BMS Micro-Nutrients is focussed on:
  - controlling air emissions during the production of our foliar nutritional products
  - preventing, reusing, recycling, and separating waste, as well as minimising the amount of waste
  - preventing soil and groundwater contamination
  - limiting water consumption and preventing the discharge of industrial waste water
  - optimising energy use
  - making a conscious effort to efficiently use raw materials in both production and the use of the products
- pursuing high customer satisfaction and carrying out sufficient investigations to resolve customer complaints;
- delivering products to customers on time;
- making use of efficient processes.

We consider our quality and environmental policy to be as valuable as any other policy, both technically and financially.

BMS Micro-Nutrients strives to ensure all employees maintain the quality and environmental standards that correspond to the company's quality and environmental system.

This policy statement has been communicated to all employees and is available to all interested parties, including the public.
